

Brainstorming & Idea Prioritization Template

Date	27 June 2026
Team ID	
Project Name	Voice-Based Communication Understanding Analyzer
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

During the brainstorming phase, every team member contributed ideas related to the **Voice-Based Communication Understanding Analyzer** project. The objective was to generate a wide range of possible features and solutions without evaluating or rejecting any suggestion. This encouraged creativity and allowed the team to explore different aspects of voice communication analysis.

The ideas included:

- Converting voice input into text using speech recognition.
- Detecting the speaker's emotions such as happiness, sadness, anger, or neutrality.
- Evaluating communication quality by analyzing speech clarity, confidence, speaking speed, and pauses.
- Extracting keywords and generating summaries from conversations.
- Creating an interactive dashboard to display transcripts, emotion analysis, communication scores, and reports.
- Identifying filler words (such as "um" and "uh") to improve communication effectiveness.
- Supporting multiple languages for speech recognition and analysis.
- Providing personalized feedback to help users improve their communication skills.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Muppagowni Sai Krishna (Team Lead)	Convert speech to text using AI speech recognition	Speech Recognition	1
2	Shaik Baharunnisa	Analyze the emotional tone (happy, sad, angry, neutral) from voice	Emotion Detection	2
3	Nallappagari Naveenkumar reddy	Generate a summary and communication insights from conversations	NLP & Communication Analysis	3
4	Ponnampalli Raghava	Detect speaking pace, pauses, and clarity to evaluate communication quality	Voice Analytics	4
5	Ibrahim Syed	Develop a dashboard to display transcripts, emotions, and communication reports	User Interface & Reporting	5

Step 2: Idea Prioritization

After completing the brainstorming session, the team moved to the idea prioritization phase. In this stage, all the generated ideas were carefully evaluated based on two important criteria:

feasibility and **importance**. Feasibility refers to how practical it is to implement an idea using the available technology, resources, time, and team skills. Importance indicates how much value the feature adds to the project's objectives and user experience.

Each idea was discussed by the team members and assigned a rating of **High**, **Medium**, or **Low** for both feasibility and importance. Ideas that scored high in both categories were given the highest priority because they could be implemented successfully while providing significant benefits to the users.

For the **Voice-Based Communication Understanding Analyzer** project, the team selected core features such as **speech-to-text conversion**, **emotion detection from voice**, **communication quality analysis**, **conversation summarization**, and **an interactive reporting dashboard**. These features were chosen because they directly support the project's goal of understanding and analyzing voice-based communication effectively.

The idea prioritization process helped the team focus on the most valuable and achievable features, ensuring efficient use of resources and improving the overall quality of the final system. By selecting high-priority ideas, the project became more organized, manageable, and aligned with the expected outcomes

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Speech-to-Text Conversion	High	High	1	Yes
2	Emotion Detection from Voice	High	High	2	Yes
33	Conversation Summary & Communication Analysis	Medium	High	3	Yes
4	Speaking Pace & Clarity Analysis	Medium	Medium	4	Yes
5	Dashboard for Reports & Insights	High	Medium	5	Yes
