Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Customer Problem Statement

Effective communication plays a vital role in education, business, customer service, and everyday interactions. However, many individuals and organizations find it difficult to understand the quality of spoken communication because traditional methods rely on manual observation and subjective feedback. There is often no automated system that can accurately analyze speech, identify emotions, evaluate communication skills, and provide meaningful insights.

Users such as students, professionals, trainers, and customer support organizations need a solution that can automatically convert speech into text, detect the speaker's emotional state, analyze communication patterns, and generate useful reports. Existing solutions often focus on only one aspect of voice analysis and do not provide a comprehensive understanding of spoken communication.

The **Voice-Based Communication Understanding Analyzer** addresses this problem by using speech recognition and artificial intelligence to analyze voice recordings. The system converts speech into text, identifies emotions, evaluates communication quality based on factors such as clarity, speaking speed, and pauses, and presents the results through an interactive dashboard. This enables users to understand their communication strengths and areas for improvement, leading to more effective and confident communication.

Example:
