Empathy Map

Empathy Map Canvas

The Empathy Map Canvas for the Voice-Based Concept Understanding Analyser (VBCUA) is a human-centered design framework that helps developers understand the experiences, expectations, and challenges faced by students, educators, and job seekers when explaining concepts through speech. By analyzing what users say, think, feel, and do, the empathy map reveals common issues such as lack of confidence in speaking, difficulty expressing conceptual knowledge, fear of interviews and presentations, and the absence of objective feedback on communication skills. It also highlights users' expectations for an AI-powered platform that can accurately evaluate conceptual understanding, analyze speech fluency, and provide personalized feedback for continuous improvement. This empathy-driven approach ensures that VBCUA is designed not only to assess conceptual knowledge but also to enhance communication confidence and learning outcomes.

EMPATHY MAP CANVAS VOICE-BASED CONCEPT UNDERSTANDING ANALYSER (VBCUA)

This empathy map helps us understand the experiences, needs, and challenges of users who want to evaluate and improve their conceptual understanding and communication skills through spoken explanations. It captures what users say, think, do, and feel when using VBCUA.
